Revised: August 21, 2020

STANDARD OPERATING PROCEDURE # FAC 5.003

Subject: Sewer Camera Operating Procedures

Purpose and Scope: To familiarize Facilities Maintenance personnel on proper use of Sewer Camera Radio Detection Receiver, TV and VCR for storm drains, sewer lines and conduit inspection/documentation.

Procedure: When a request is submitted through Work Control that requires the use of the sewer camera, Facilities Maintenance will assign the task to a Maintenance Supervisor to operate equipment to minimize damage.

Recommended Maintenance: When the task involving the camera is complete, the operator should clean the camera and fiber cable with disinfectant. Wipe the TV/VCR and Radio Detection Receiver down with a clean cloth. Ensure the case is closed to protect the equipment until the next use.

Note: The sewer camera is a fragile and expensive piece of equipment and requires the tasks above to be performed after each use.
